Attention Mr Graham Goodwin

REPORT COMPILED FOR PINE DALE MINE COMMUNITY CONSULTATIVE COMMITTEE DETAILING SURFACE WATER, GROUNDWATER DEPOSITIONAL DUST, HVAS AND METEOROLOGICAL MONITORING NOVEMBER 2017

1 GENERAL COMMENTS

Job Number: 6880.

Date Samples Received: During the month of November 2017.

Samples received were sampled by RCA Laboratories – Environmental staff.

This report satisfies the requirements to monitor environmental parameters as presented in the Pine Dale Mine Environmental Protection Licence (EPL 4911).

2 ANALYTICAL PROCEDURES

The analytical procedures used by RCA Laboratories – Environmental (NATA Accreditation number 9811) are based on established internationally recognised procedures such as APHA and Australian Standards. Analytical test methods are detailed in **Table 1**. ALS Environmental has been used to obtain analysis of anions, cations and dissolved metals (NATA Accreditation number 825).

3 WATER MONITORING RESULTS

3.1 GROUNDWATER

A total of 2 on-site groundwater samples were collected during the month of November 2017. Water quality analysis results are shown in **Table 2**.

4 AIR QUALITY MONITORING RESULTS

4.1 HIGH VOLUME AIR SAMPLERS (HVAS)

HVAS at this facility conform to AS/NZS 3580.9.3:2015, AS/NZS 3580.9.6:2015 and AS/NZS 3580.1.1:2016.

The high volume air sampling unit ran for greater than 24 ± 1 hours on 2 November 2017. Therefore the high volume air sampler ran longer than the requirements detailed in AS/NZS 2580.9.6. Although the run duration on this date was longer than required, the results are considered low and do not exceed the 24 hour assessment criteria.

HVAS Total Suspended Particulate analysis results are shown in **Table 4**. PM₁₀ Suspended Particulate Matter results are shown in **Table 5**.

^{**} In a review of the Pine Dale Coal Mine water trigger levels (approved by the NSW Department of Primary Industries and Environmental Protection Authority) trigger levels for pH, conductivity and total suspended solids have been developed for EPL Point 2, 3 & 14. However, these triggers are not stipulated as part of EPL 4911.

4.1.1 TSP Summary

The NSW EPA Annual Mean TSP allowable limit is $90\mu g/m^3$. All TSP HVAS results recorded during this monitoring period are in compliance with consent conditions, as the *current rolling annual mean* (from December 2016 to November 2017) for the TSP unit is $19.1\mu g/m^3$, which is well below the allowable limit of $90\mu g/m^3$.

4.1.2 **PM**₁₀ Summary

The NSW EPA 24h Maximum PM_{10} allowable limit is $50\mu g/m^3$. The EPA Annual Mean PM_{10} allowable limit is $25\mu g/m^3$. All PM_{10} HVAS results recorded during this monitoring period conform to consent conditions, as the *current rolling annual mean* for the PM_{10} unit is $9.4\mu g/m^3$, which is below the allowable limit of $25\mu g/m^3$. The 24 hour maximum allowable limit of $50\mu g/m^3$ was not exceeded during the month of November 2017.

4.1.3 Comments

HVAS monitoring locations are shown in **Appendix 1**. Graphical HVAS results presentations are shown in **Appendix 2**.

4.2 DEPOSITIONAL DUST

Depositional Dust Gauges at this facility conform to AS/NZS 3580.10.1:2016 and AS/NZS 3580.1.1:2016. Depositional Dust monitoring results are shown in **Table 5**.

4.2.1 Allowable Depositional Dust Limits

The EPA Long Term (Annual Average) Dust Limit is $4g/m^2$ per month. All Depositional Dust results during this monitoring period are in compliance with consent conditions. The Annual Average for Dust Gauges D1, D2, D3, D4, D5 and D6 are all less than or equal to $1.0g/m^2$ per month, which is below the allowable Annual Average Long Term Limit of $4g/m^2$ per month.

Depositional Dust monitoring locations are shown in **Appendix 1**. Graphical Depositional Dust results are shown in **Appendix 2**.

5 BLASTING RESULTS

No blasting was undertaken during this month as mining operations have ceased since the end of March 2014.

6 NOISE MONITORING RESULTS

Routine quarterly noise monitoring was not required to be undertaken during November 2017.

7 OPERATIONAL ACTIVITIES

All of the approved minable reserves at the Pine Dale Mine have now been exhausted. Operational mining and the last coal sales ceased as of the end of March 2014.

All former operators have been made redundant; however some statutory positions still remain. Pine Dale Mine has been placed in care and maintenance since April 2014.

8 SUMMARY

During the month of November 2017 environmental monitoring constituents were found to be generally in compliance with EPL 4911 with the exception of electrical conductivity in groundwater sample P6 and P7.

Standing water levels within the site groundwater bores were compliant with their respective trigger levels. The pH at both bore P6 and P7 was compliant with the respective trigger level range. The electrical conductivity at bore P6 and P7 exceeded the respective trigger level.

Rolling annual averages from both the TSP and PM_{10} High Volume Air Samplers are currently well below the EPA Annual Mean TSP and PM_{10} criterion of $90\mu g/m^3$ and $25\mu g/m^3$ respectively.

Currently there are no depositional dust gauge results which are greater than the EPA Long Term (annual average) criteria of 4g/m².month based upon a rolling average of the past 12 months.

Pine Dale Mine ceased operation in March 2014 and therefore no blasting occurred at the site.
