# REPORT COMPILED FOR COMMUNITY CONSULTATIVE COMMITTEE DETAILING AIR, WATER AND METEOROLOGICAL MONITORING AT PINE DALE OCTOBER 2019

#### 1 INTRODUCTION

This report presents the results of air, water and meteorological monitoring undertaken at Pine Dale Mine, Blackmans Flat during the month of October 2019.

Air and water samples were collected by RCA Laboratories – Environmental staff. Meteorological data was obtained from the site weather station.

This report satisfies the requirements to monitor environmental parameters as presented in the Pine Dale Mine Environmental Protection Licence (EPL 4911).

#### 2 ANALYTICAL PROCEDURES

The analytical procedures used by RCA Laboratories – Environmental (NATA Accreditation number 9811) are based on established internationally recognised procedures such as APHA and Australian Standards. Analytical test methods are detailed in **Table 1**.

 Table 1
 Analytical Test Methods

ALS Environmental has been used to obtain analysis of anions, cations and dissolved metals (NATA Accreditation number 825).

#### 3 WATER MONITORING RESULTS

#### 3.1 GROUNDWATER

A total of two (2) groundwater samples were collected from within the Pine Dale Mine site during October 2019. Water quality analysis results are shown in **Table 2**. Groundwater monitoring locations are shown in **Appendix A**.

Results shown in **bold italics** indicates exceedance of trigger level.

<sup>^</sup> pH trigger value is exceeded if the pH is outside the nominated range.

<sup>#</sup> Water Level trigger is exceeded if the AHD water level drops below the nominated trigger level.

#### 3.2 SURFACE WATER MONITORING

Quarterly surface water monitoring was not required to be undertaken in October 2019. The next scheduled monitoring round will be in November 2019.

#### 4 AIR QUALITY RESULTS

#### 4.1 HIGH VOLUME AIR SAMPLERS (HVAS)

Monitoring of particulate matter less than 10 micrometres (PM<sub>10</sub>) and total suspended particulates (TSP) is undertaken at Pine Dale Mine using High Volume Air Samplers (HVAS). HVAS at this facility conform to AS/NZS 3580.9.3:2015, AS/NZS 3580.9.6:2015 and AS/NZS 3580.1.1:2016. The HVAS run on a one in six-day cycle, as stipulated in the *Air Quality and Greenhouse Gas Management Plan for the Pine Dale Coal Mine.* The locations of the HVAS units are shown in **Appendix A**.

HVAS Total Suspended Particulate results are shown in **Table 3**. PM<sub>10</sub> results are shown in **Table 4**. HVAS Monitoring locations are shown in **Appendix A**. Graphical HVAS result presentations are shown in **Appendix B**.

#### 4.1.1 TSP SUMMARY

The NSW EPA Annual Mean TSP allowable limit is  $90\mu g/m^3$ . All TSP HVAS results recorded during this monitoring period are in compliance with consent conditions, as the *current rolling annual mean* (November 2018 to October 2019) for TSP is  $30.1\mu g/m^3$ , which is below the allowable limit of  $90\mu g/m^3$ .

The twelve-monthly graph is provided in **Appendix B**.

#### 4.1.2 **PM**<sub>10</sub> **SUMMARY**

The NSW EPA 24-hour maximum  $PM_{10}$  allowable limit is  $50\mu g/m^3$ . The EPA annual mean  $PM_{10}$  allowable limit is  $25\mu g/m^3$ . All  $PM_{10}$  HVAS results recorded during this monitoring period conform to consent conditions, as the *current rolling annual mean* for the  $PM_{10}$  unit is  $12.1\mu g/m^3$ , which is below the allowable annual limit (refer **Appendix B**). The 24-hour maximum allowable limit of  $50\mu g/m^3$  was not exceeded on any sampling event during the month of October 2019.

#### 4.2 DEPOSITIONAL DUST MONITORING

The depositional dust monitoring exposure period for October 2019 was 2 September – 3 October 2019. Depositional dust gauges at this facility conform to AS/NZS 3580.10.1:2016 and AS/NZS 3580.1.1:2016. Depositional dust monitoring results are shown in **Table 5**. Depositional dust monitoring locations are shown in **Appendix A**.

Dust gauge D2 has been removed from EPL 4911 and monitoring is no longer required at this location.

 Table 5
 Depositional Dust Monitoring

Deposit Gauge	Number of Days	Notes	Insoluble Solids	Ash	Combustible Matter
D1	31	I	1.1	0.7	0.4
D3	31	I	1.4	0.8	0.6
D4	31	I	1.5	0.8	0.7
D5	31	IT	1.7	0.6	1.1
D6	31	I	1.1	0.8	0.3

All units are g/m<sup>2</sup>/month

I indicates insects noted to be present in sample.

#### 4.2.1 ALLOWABLE DEPOSITIONAL DUST LIMITS

The EPA long term (annual average) deposited dust limit is 4g/m² per month. The rolling annual depositional dust results for all sites within the period (November 2018 – October 2019) are in compliance with consent conditions. The annual average for dust gauges D1, D3, D4, D5 and D6 are all less than or equal to 1.6g/m² per month. Annual averages are shown in the depositional dust gauge graphs provided in **Appendix B**.

#### 5 METEOROLOGICAL MONITORING

Pine Dale Mine records meteorological data continuously via an onsite weather station. Details of the weather data recorded during the period 1 to 31 October 2019 are shown in **Appendix C**.

Data availability during this period was 100%.

#### **6 BLASTING RESULTS**

No blasting was undertaken during this month as mining operations have ceased since the end of March 2014.

#### 7 NOISE MONITORING RESULTS

Quarterly noise monitoring was undertaken during October 2019. Results of monitoring indicated that there were no noise contributions origination form Pine Dale Mine. Results of monitoring can be found in the RCA Australia Pine Dale Mine Environmental Noise Survey Report Q4 2019, October 2019.

#### 8 OPERATIONAL ACTIVITIES

All of the approved minable reserves at the Pine Dale Mine have now been exhausted. Operational mining and the last coal sales ceased as of the end of March 2014.

All former operators have been made redundant; however, some statutory positions still remain. Pine Dale Mine has been placed in care and maintenance since April 2014.

#### 9 SUMMARY

During the month of October 2019 environmental monitoring results were found to be generally in compliance with EPL 4911 with the exception of:

- Electrical conductivity in groundwater sample P6 was in excess of the of the sitespecific trigger value.
- pH in groundwater samples P6 and P7 were below the lower level pH trigger value.

Rolling annual averages from both the TSP and  $PM_{10}$  High Volume Air Samplers are currently below the EPA Annual Mean TSP and  $PM_{10}$  criterion of  $90\mu g/m^3$  and  $25\mu g/m^3$  respectively. Currently there are no depositional dust gauge results which are greater than the EPA Long Term (annual average) criteria of  $4g/m^2$ .month based upon a rolling average of the past 12 months.

Meteorological monitoring was undertaken for the entire month of October with 100% data capture.

Pine Dale Mine ceased operation in March 2014 and therefore no blasting occurred at the site.

#### 10 LIMITATIONS

This report has been prepared for Enhance Place Pty Ltd in accordance with an agreement with RCA Australia (RCA). The services performed by RCA have been conducted in a manner consistent with that generally exercised by members of its profession and consulting practice.

This report has been prepared for the sole use of Enhance Place. The report may not contain sufficient information for purposes of other uses or for parties other than Enhance Place. This report shall only be presented in full and may not be used to support objectives other than those stated in the report without written permission from RCA Australia.

The information in this report is considered accurate at the date of issue with regard to the current conditions of the site. Conditions can vary across any site that cannot be explicitly defined by investigation.

Environmental conditions including contaminant concentrations can change in a limited period of time. This should be considered if the report is used following a significant period of time after the date of issue.

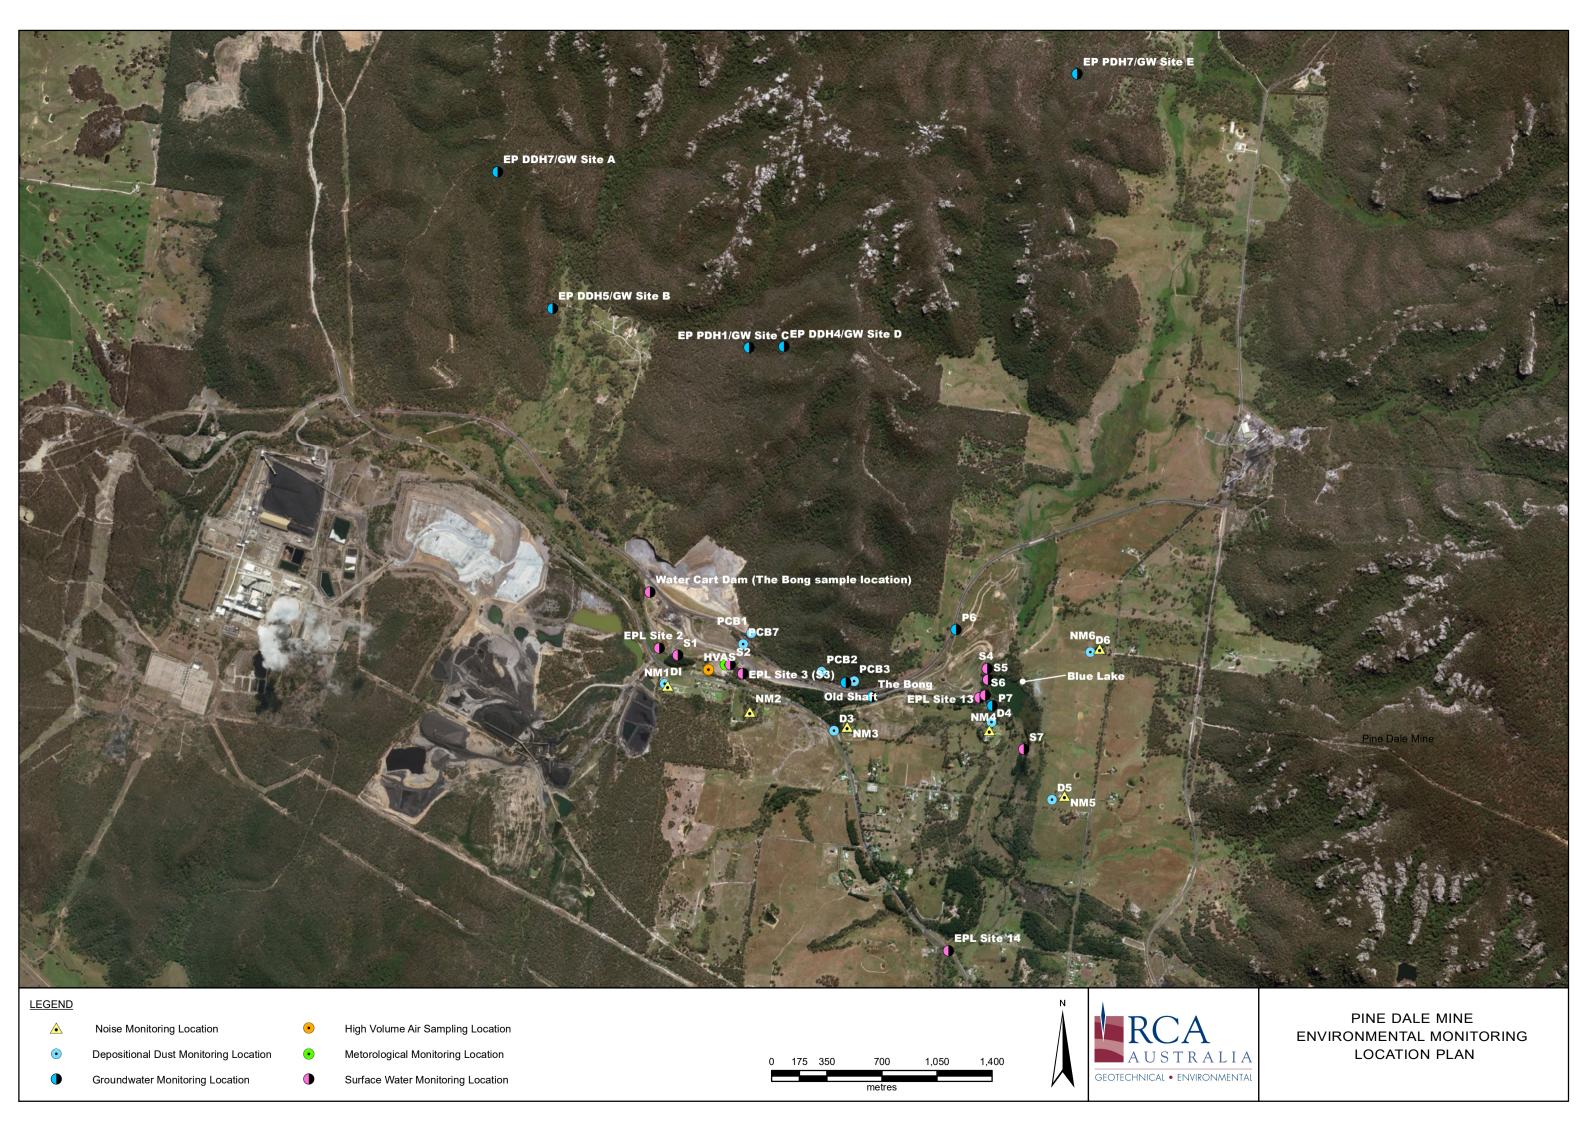

Yours faithfully
