

Issue 17, December 2010

TRUenergy Tallawarra community update.

In this final newsletter for 2010, we provide an update on Tallawarra A and recent sustainability activities on the Tallawarra Lands site.

TRUenergy thanks you for your interest in the Tallawarra projects and wishes you and your family a restful and safe holiday season.

Anthony Savenkov
Project Manager – Tallawarra Lands

Tallawarra A

Tallawarra A power station has performed reliably since its official opening in March 2009, and has continued to meet its strict noise and emission licence requirements.

It is Australia's most efficient gas-fired power station, generating over 400 megawatts of electricity - enough energy to power more than 200,000 homes.

Maintenance procedures are regularly undertaken on the plant, and as a company that places safety first, we are pleased to report there have been no lost time injuries over the past year of operation.

Tallawarra Lands sustainability activities

You may have noticed new lighting along the Yallah Bay Road Lake Illawarra foreshore area.

TRUenergy has recently installed this lighting to help improve access and safety. It's also a great addition to the upgraded foreshore area, including the new jetty opened by the Lake Illawarra Authority (LIA).

As part of its commitment to sustainability, TRUenergy has used energy efficient T5 fluorescent lighting.
